

Empower Instructors with AI

Blackboard® is the first major learning management system (LMS) to extend generative AI capabilities to instructors to inspire course structure, assessments, and grading rubrics. Developed in partnership with Microsoft, the AI Design Assistant leverages enterprise-grade AI to provide a head start for instructors and instructional designers when creating a course in Blackboard.

Powered by
Azure OpenAI

Built with **privacy, security,
and safety in mind**

Efficient
content creation

The AI Design Assistant saves time on production tasks, allowing instructors to focus on what they do best: **teaching**.

Simplify course creation

Get recommendations for course structure, including titles, modules, and descriptions.

Content-based test generation

Obtain suggestions for test questions and authentic assessment tasks, including discussions, journals, and assignments.

Rubric creation

Draft grading rubrics to evaluate student performance consistently and fairly.

Royalty-free image sourcing

Get automated image recommendations based on course content—royalty free and ready for use.

Complete instructor control

Designed in accordance with Anthology's Trustworthy AI Approach, the instructor maintains full control over course content and can review and edit all AI-generated suggestions based on their subject matter expertise and pedagogical approach.
