Using data as a strategy for success

Access to data with no strategy, structure, or hierarchy limits its value. Mapping and customizing data according to your needs will help boost your operations and decision-making while enabling data collection from Anthology products in your ecosystem. Anthology offers a set of robust services to enhance access and use of data and analytics in Anthology Illuminate by allowing the ingestion and aggregation of third-party data sources and the creation of custom reports.

Leverage all these services or the ones that meet your unique analytics needs:

SIS Data Ingestion

Extract, process, and import data from student information systems other than Anthology® Student into the Anthology Illuminate data model and leverage the full value of Anthology Illuminate.

Anthology Illuminate Streams

Themed datasets allow rapid access to insights focusing on your stakeholders' performance and engagement. Streams leverage data from Anthology Illuminate to provide additional insights beyond the pre-built reports and datasets available in the solution.

Three Anthology Illuminate Streams

- Learning Streams: reporting on student activity, engagement, and performance
- Teaching Streams: reporting on instructional practice and course design
- Leading Streams: reporting on tool adoption and return on investment

Custom Reporting

While Anthology Illuminate Developer allows you to create reports using the data available in the data model, you may not have the expertise or desire to develop custom reports. Consulting services are available to identify and build reports customized to your institution's formats, types, and delivery needs.

Training

Anthology data experts assist in understanding the Illuminate data model, accelerating adoption, and leveraging data for educational and operational optimization.

Orientation and Onboarding

This training introduces the Anthology Illuminate platform and its canonical data model, standard reporting, and tools.

Illuminate Foundations

This training assists you through the development of up to three use cases for report creation within Anthology Illuminate. It includes report scoping, building queries, and delivery, as well as support and revisions from our team of analytics consultants.

Illuminate Advanced Data Model Training

This training provides a deeper understanding of the Illuminate data architecture. It guides institutional teams on extending Illuminate data sources to stage and process data from Anthology® Blackboard, Anthology Student, and other LMS/SIS solutions outside the Anthology ecosystem.

Illuminate Enhanced Reporting Training

Basic and advanced workshops are available to institutions with an Illuminate Enhanced Reporting license. The basic option focuses on the creation of custom reports, while the advanced option covers the building of dashboards, data sets, and advanced functionalities for creating calculations, filters, and enhanced visualizations.

Leverage data across your ecosystem regardless of your SIS

Ensure you have information and reports from Anthology products, even if you have a student information system (SIS) other than Anthology Student. We'll ingest the data and ensure it is aligned and synced.

Measure success in ways that matter

Custom reports track KPIs according to your needs.

Use data as a resource to strategize

Set up a data strategy to identify operational gaps, risks, data breaches, and opportunities to improve institutional performance and student experience and drive institutional growth.

Reduce costs and foster productivity

Prioritize resources over manual data aggregation—no need to import data or create custom reports. Leave data model enhancements and report delivery in the hands of experts, so your team can focus on more important tasks.

Get further insight for decision-making

Gather and analyze additional data from the same platform to make accurate and informed decisions and identify behavioral trends and opportunities from your stakeholders for timely intervention.

Boost your teams' skills and know-how

Provide comprehensive training to teams engaging with data and get the most out of it.
